

How To Get Your Post Processor Modified

1. For each Post that needs to be corrected/modified, you need to create a .vnc file and post code from that file.
2. Save the .ncf file (posted code) as a Word document (.docx).
3. Open said file from above in Word and click on Review (6th word from "Home"). Under "Review" look for "Track Changes." Select the little drop-down arrow and then select "Track Changes."
4. Modify or remove what needs to be changed by hitting the "backspace" key on your keyboard and type in what code you are wanting. Or leave it blank, if for instance you are wanting a certain code completely removed.
5. When finished editing your code save the file.
6. Send the .vnc, .ncf, and .docx files to: Post@GibbsCAM.com. If your email attachment is larger than 50MB, you can:
 - Upload your files to your own file share site, if you have one, and send the link to the GibbsCAM Post Department, or
 - Email us at Info@MorningstarCAM.com and we will send you a direct upload link.
7. Send an email to the Post Department (separate emails for each post needing changes): Post@GibbsCAM.com that includes all file names and what post name you used to create code, your company name, contact information, and brief description of what you are wanting.
